TECHNICAL SKILLS

Languages & Architecture: Java, Go, C/C++, JavaScript, Microservices, Distributed Systems, System Design

Tools & Frameworks: Spring Boot, Node.js, React.js, Express.js, Temporal, Git, Maven

Databases, Cloud & DevOps: Redis, MySQL, PostgreSQL, MongoDB, AWS (SQS, Lambda, EC2), Docker, GitHub Actions

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Object-Oriented Programming, DBMS

EXPERIENCE

•Freecharge

Gurgaon, India

Software Developer (Java / Spring Boot)

Jan 2025 – Present

- Developed and maintained **Java Spring Boot microservices** powering Freecharge's Merchant Cash Advance (MCA) platform — covering merchant onboarding, loan disbursement, repayment, and lifecycle management — reliably processing **15,000+ daily transactions** in production.
- Migrated the loan disbursement pipeline from a custom task framework to **Temporal Workflows**, reducing failed transactions by **~10%** through automatic retry handling, improved fault tolerance, and reliable workflow state management.
- Architected an **event-driven loan processing pipeline** using **AWS SQS**, enabling idempotent asynchronous processing and eliminating dependency on Axis Bank for event retriggering — improving operational efficiency by **10–15%** and cutting manual intervention significantly.
- Designed **SSL/TLS-secured REST API integrations** with Axis Bank featuring **Circuit Breaker** and **Exponential Backoff Retry** mechanisms, ensuring high availability for thousands of daily bank API calls and reducing cascading failures from upstream outages.
- Built **AWS Lambda**-based monitoring services for database consistency and disbursement validation, enabling proactive failure detection and eliminating manual production monitoring overhead.
- Implemented automated **daily EMI deduction logic** aligned with merchant cash flows, ensuring accurate repayment processing, transaction reconciliation, and reliable end-to-end loan lifecycle management.

PERSONAL PROJECTS

•Distributed Rate Limiter Gateway Microservice

Java, Spring Boot, Redis, AWS EC2, Docker, GitHub Actions

- Designed a **microservice API gateway** that centrally routes requests across backend services while enforcing configurable per-user and global rate-limiting policies.
- Implemented distributed rate-limiting using the **Token Bucket algorithm** with **Redis** as a shared state store, leveraging atomic **Lua scripts** for thread-safe request throttling across multiple gateway instances.
- Built a **dynamic service discovery** mechanism using YAML-based configuration, enabling automatic service registration and request routing without requiring code changes.
- Containerized using **Docker** and deployed on **AWS EC2** with **GitHub Actions** CI/CD, integrating centralized logging and automatic log rotation for production monitoring.

•Distributed Multi-Room Chat System

Go, Node.js, WebSockets, Redis Pub/Sub, PostgreSQL, AWS

- Built a scalable real-time messaging architecture pairing a concurrent **Go** messaging cluster for core business logic with a **Node.js** presentation API layer for low-latency bidirectional communication.
- Implemented **WebSocket** lifecycle management with automated heartbeats, and integrated **Redis Pub/Sub** as an inter-service message broker to fan out state across decentralized nodes for horizontal scalability.
- Designed an experimental **MCP semantic layer** using vector embeddings to inject room dialogue history into LLM prompts, enabling context-aware in-app assistance.

ACHIEVEMENTS

- Achieved a maximum competitive rating of **1806** on [LeetCode](#), solving over **1,000** algorithmic and data structure problems.
- Secured a global rank of **1,786** in LeetCode Weekly Contest 475.

EDUCATION

•The LNM Institute of Information Technology

Bachelor of Technology in Computer Science and Engineering

Jaipur, India

2021 – 2025
